PROFESSIONAL SUMMARY

Data-focused developer and analyst with 5+ years of experience transforming complex datasets into interactive tools, visualizations, reporting systems, and digital products. Experienced working directly with journalists, policy teams, and non-technical stakeholders to translate analytical requirements into accessible, reliable solutions. Background spans data analysis, Python, SQL, statistical methods, cloud infrastructure, data visualization, analytics, and application development.

SKILLS AND ABILITIES

Data & Analysis: Python, SQL, R, Pandas, SAS, statistical analysis, data cleaning, data validation, exploratory analysis, Excel
Web Technologies: JavaScript (ES6+), TypeScript, React, HTML5, CSS3, Tailwind CSS,
Cloud & Data Infrastructure: AWS Lambda, S3, CloudFront, API Gateway, DynamoDB, Supabase
Databases: MySQL, SQL fundamentals
Analytics & Workflow: Google Analytics 4, Parse.ly, Git/GitHub, WordPress, Google Sheets
Additional: AI-assisted development and analysis workflows, Adobe Illustrator, Photoshop

PROFESSIONAL EXPERIENCE

Better Government Association, Chicago, IL **Feb. 2021 - Present**
Web Developer & Digital Content Manage
Develop data-driven applications, interactive visualizations, analytics systems, and digital products for the Better Government Association, Illinois Answers Project, and BGA Policy, collaborating across editorial, policy, and organizational teams.

- Partner with journalists, policy analysts, editors, and other non-technical stakeholders to translate reporting and business requirements into data-driven applications, dashboards, visualizations, and digital tools.
- Clean, transform, structure, and validate data from spreadsheets, public datasets, APIs, government records, and other sources for analysis and publication.
- Develop interactive data visualizations and analytical interfaces using JavaScript, D3.js, Svelte, React, Mapbox, Datawrapper, Flourish, and related technologies.
- Develop cloud-based data pipelines and applications using AWS Lambda, API Gateway, S3, CloudFront, DynamoDB, and Supabase.
- Build and maintain analytics infrastructure using Google Analytics 4 and Parse.ly to measure audience behavior and support data-informed decisions.
- Develop serverless tracking systems that collect, structure, and analyze engagement data from distributed content across external websites.
- Create interactive databases and search tools that make large and complex public datasets accessible to general audiences.

EDUCATION

DePaul University **September 2016 - May 2020**
B.S. (Major: Computer Science w/ focus on User Experience)
GPA: 3.8/4.0; Magna Cum Laude

Additional Analytical Training
Graduate-level coursework and independent study in statistics, biostatistics, epidemiology, and quantitative analysis. Experience with statistical concepts and methods including descriptive statistics, hypothesis testing, chi-square analysis, prevalence measures, odds ratios, and interpretation of quantitative results.
